

ABSTRACT

A reproducing/recording apparatus including a first disk tray (11) for mounting a first disk thereon and a second disk tray (12) for mounting a second disk that is of a type different from the type of the first disk thereon. The first disk tray (11) is adapted to be moved into and away from the apparatus through a single disk inlet/outlet port (10A) with the second disk tray (12) laid thereon. The reproducing/recording apparatus can be downsized even when it is adapted to reproduce information from and record information onto a number of disks of different types.
